

# Intubate in a bag – COVID +

Standard clear plastic refuse bag with closed corners cut off

ETT, 2 filters, inline suction (if necessary), mask, clamp, cuff inflator, lubricant, OPA, receptacle for dirty equipment

Preload ETT with filter and inline suction

Start with head lying on bag

Lift bag over head as you remove barrier mask

Intubator's hands through the cut corners, circuit and face mask through the open end

Bag pulled down to chest. Laryngoscope, circuit and suction through open end of bag

Intubate (Video or direct laryngoscopy)

Inflate cuff then connect circuit

Ready for surgery: tuck the bag around head and neck, leave mask in bag for airway emergencies
